

Accurate, Easy Project Monitoring and Verification

Performance Data simplifies data collection and provides accurate usage data to validate performance contracts, ensuring transparency in energy-as-a-service financing.

Obtain equipment data for all of your energy equipment projects in an easy-to-use platform.

Validate equipment is performing according in line with contracted expectations

Quantify the cost savings and environmental impact of energy projects in a few clicks

Visit [Redaptive.com](https://www.redaptive.com) to schedule a demo and learn how Performance Data can provide performance transparency.

Key Benefits

Accurate, High-Resolution Data:

Support energy projects with accurate, high-resolution energy data (15/60 minute granularity) updated every 15 minutes providing a detailed view of electricity consumption.

Quantify Project Impact:

Provide robust data to show cost savings and the sustainability impact of completed projects across your sites. Quickly quantify project impact in a few clicks.

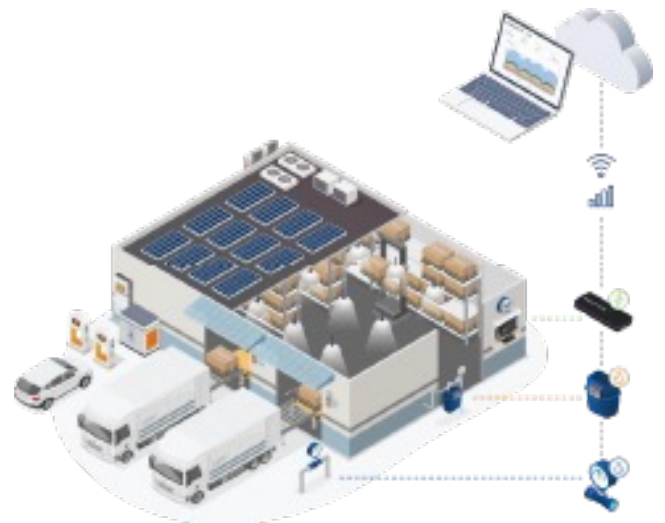

Invoicing and Data in One Place:

All invoices are stored throughout the project so energy project leaders and accounting team members can easily cross-reference invoices, cost-savings, and energy usage.

Simple Installation and Implementation:

Installation does not require downtime. Provisioning and commissioning are completed by data engineers remotely, making it a quick and easy process.

How It Works

Cellular-enabled energy and water meters syndicate equipment level usage data to Redaptive's cloud.

Redaptive's cloud cleans and aggregates usage data, then populates data in Redaptive ONE Building Insights.

- ✓ Cost-efficient hardware and installation
- ✓ Real-time, high-resolution data
- ✓ Secure, encrypted data transmission

Discover how our innovative solutions can unlock efficiency in your building portfolio and accelerate its sustainability journey.
